AVT EDU623

It is widely known that the four-leaf clover is a symbol of good luck. Ours can also be! This extremely charming and easy to install putty will please the eye thanks to two pairs of LEDs that flash in a changing rhythm. Maybe our proposal will not fit into the average wallet, but we guarantee that it will bring a lot of happiness and satisfaction from self-assembly. Because who doesn't like to develop their skills in an interesting way!

Specifications

- 4 high brightness LED diodes (pure green)
- automatic modulation of flash frequency
- power supply: 9VDC [6F22] - battery not included
- small power consumption (approx. 9mA for 9V power supply)
- circuit board dimensions: 65×65 mm

Figure 1. Schematic diagram

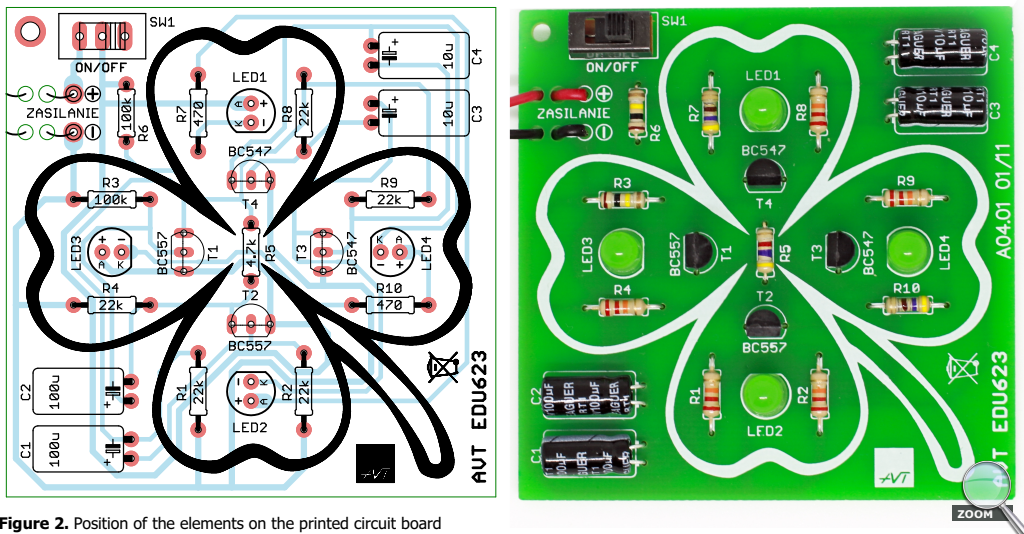

Figure 2. Position of the elements on the printed circuit board

Suggested order of assembly:

R1, R2, R4, R8, R9 :22k Ω (red-red-orange-gold)
 R3, R6:100k Ω (brown-black-orange-gold)
 R5:4,7k Ω (yellow-violet-red-gold)
 R7, R10:.....470 Ω (yellow-violet-brown-gold)
 C1, C2:100 μ F !
 C3, C4:10 μ F !
 T1, T2:.....BC557 or BC558 !
 T3, T4:.....BC547 or BC548 !
 LED1-LED4:LED diode green !
 SW1:switch
 battery connector: red-positive , black-negative \ominus

Begin by soldering the elements onto the circuit board in order from smallest to largest.

When assembling the elements marked with "!" pay attention to their polarity and placing of the notch.

You may find the frames with symbols of these elements on the circuit board, as well as photos of the assembled kit helpful.

Assembly instructions

- 1** Touch the tip of the soldering iron to the end of the element near the soldering field
- 2** Next, apply tin solder
- 3** After the cone forms, remove tin solder first, and then the soldering iron
- 4** The whole process should take approx. 2-3 seconds.

The cleanness of the soldered surfaces, right amount of flux in the solder, adequately high temperature (320-360°C), and sufficient amount of solder are necessary to complete a correct bonding.

Too much tin solder can result in forming a ball instead of a cone or joining of two adjacent soldering points.

Inadequate temperature, amount of tin solder or impurities can lead to so called "cold solder joints, i.e. solder and the flux can't moisten the two surfaces and the resulting solder point is fragile and in time will oxidize, break, and stop working.

Thank you for purchasing AVT product. Please take your time to read carefully the important information below concerning use of this product.

Educational Electronics Kits are intended for educational and demonstration purposes only. They are not intended for use in commercial applications. If they are used in such applications the purchaser assumes all responsibility for ensuring compliance with all local laws. In addition, they cannot be used as a part of life support systems, or systems that for use as or as a part of life support systems, or systems that might create a hazardous situation of any kind.

- Battery or wall-adaptor are safe devices. They do not require special attention unless main voltage is connected to an output e.g. a relay.
- If the kit is used to switch currents greater than 24V it is necessary to have the installation and performed by a trained professional authorized for such work. The kit may only be used in such application if it was installed in a safe to touch enclosure.
- Never exceed the limits or ratings listed in the 'Specifications' section at the this user guide.
- If the kit is used in schools or educational facilities or similar institutions the operation must be supervised by trained and authorized staff.
- The product itself and all parts thereof (including packing material) are not suitable toys for children! (choking hazard, risk of electric shock, ...)

Failures in modern electronic component are very rare as 95% of non-working kits are due to poor soldering or components placed in the wrong location or orientation so please check your work carefully.
